A New Technology

Pipes Down Under is an innovative system designed and engineered for the repair and re-lining of underground pool, spa, waterfalls and decorative fountain piping.

The low profile specially manufactured helix liner can be installed in various types of pipe material. PDU can negotiate around multiple bends including 90 degree turns.

- Line Pipes 1 1/2" to 2" in Dia.
- In Most cases you don't have to drain the pool or fountain
- Average Installation time is less than 2 hours

Installation

There is minimal or no excavation required to install the PDU system. The procedure to insert and seal the helix liner in an existing leaking pipe does not require any elaborate and expensive equipment. A crew of two can complete an average installation project in less than 2 hours.

Back In Service

Since there is very little disruption to the pipes and surrounding areas, your customer is back in service quickly. In most cases the pool or fountain does not need to be drained and refilled.

Swimming Pools / Spas

Decorative Fountains

Waterfalls
